

LOTO Placards

How to use this folder — Snak King, by department

What you have

29 Excel files, one per department, covering all 499 pieces of equipment. Each file holds the lockout/tagout placards for that department — an English page and a Spanish page for every machine.

You do not need Excel expertise. Each file is already set up to print.

To print the placards

1. Open the department's file.
2. It opens on the **Placards** tab, which is the printable one. Do not switch tabs before printing.
3. Press **Ctrl + P** (Windows) or **Cmd + P** (Mac).
4. Print. Page size, orientation and page breaks are already set: landscape, one placard per page.

If your print dialog offers “Print Active Sheet” and “Print Entire Workbook”, choose **Print Active Sheet**. The other tabs are reference data, not placards.

Machines with several energy sources run onto a second sheet. That is intentional — the full isolation procedure is printed rather than cut short to fit one page.

What is in each file

Tab	What it is
Placards	The printable placards. This is the tab the file opens on.
Read Me	A short summary of what the file contains.
Index	A list of every placard, with a link that jumps to it.
Equipment	One row per machine — department, photo status, verification.
Energy Steps	Every isolation step, filterable by machine or energy type.
Summary	Counts for the department.

About the photos

Every placard carries two photos: the equipment itself, and its isolation or disconnect point. Each is stamped with the equipment ID in the corner, so a picture stays identified even if it is copied out of the placard into a report or work pack.

The isolation photo is what a worker matches against the machine in front of them before applying a lock. If a photo looks wrong for the machine, flag it to whoever sent you this folder rather than posting that placard.

Making changes

These are ordinary Excel files. Edit any cell, save, print — nothing is locked.

One thing to know: the placard pages are a snapshot. Editing a placard here changes **this file only**. It does not change anything back in the Soteria Field system, and a fresh export would not carry your edit. If a correction should stick, have it made in Soteria Field as well.

Two things to check before posting these

1. The Spanish pages are marked BORRADOR — NO REVISADO (draft, not reviewed). No Spanish translation has been signed off in the system yet. Have them reviewed, or post the English pages only, until that is done.

2. Some hazard notes on Spanish pages appear in English. Where a machine has a specific warning that has not been translated, the English wording is shown rather than generic text, so the warning is not lost.

Generated from Soteria Field. Placard content — isolation steps, energy codes and verification methods — comes directly from the LOTO records; nothing is summarised or shortened.
